**Let (Wireless) Freedom Ring!**

***iobeam, Inc., brings broadband wireless service to North Metro Atlanta Airport***

ATLANTA (July 7, 2003) -- Iobeam, Inc., a wireless internet service provider ([www.iobeam.com](http://www.iobeam.com)) based in Atlanta, Georgia, and Preferred Jet Services, an aviation services facility, announce the deployment of iobeam broadband wireless internet service at McCollum Field, the sixth busiest corporate airport in the Southeast United States. Patrons of Preferred Jet Center can enjoy the freedom and convenience of wireless internet access while utilizing the many services Preferred Jet Center offers its charter and corporate aviation customers. Pilots, passengers, and visitors now have the benefit of wireless internet access, using laptops and PDAs to conduct their professional and personal business without troubling over wires or lack of available network jacks or internet connections.

"iobeam has provided us with an extremely valuable asset and we are very excited about offering wireless service," says Jennifer Haddix, General Manager of Preferred Jet Services. "Most of the pilots who bring their passengers here stay here for quite a few hours and almost all of them have laptops. We have a small computer room where they have been able to set up their systems and plug in, but now they have freedom of mobility and can enjoy our entire facility at their leisure."

"The deployment of broadband WiFi at Preferred Jet Center provides a needed and valuable service to mobile business customers who frequent one of the busiest corporate airports in the Southeast," says Jeffrey Blau, Vice President of iobeam. "Our service at McCollum is also demonstrating the benefits of wireless networks to infrastructure business in the field. In addition to the many advantages to the busy executive that needs to stay connected while traveling, aviation service personnel who rely on network access in their daily work are now free to move about the hangars and tarmac while accessing management software or portals that were previously desk-bound."

As WiFi markets evolve, iobeam continues to make advances using efficient integration of inexpensive technologies, often leapfrogging the alternatives available to specific vertical industries preparing for full-scale wireless deployment.

**About iobeam, Inc.**

iobeam deploys broadband wireless Internet access in under served markets such as FBOs, marinas, MDUs, and other venues. iobeam sells turnkey solutions for venues that seek to provide Internet access services to their own existing member base. In addition, iobeam offers wireless broadband subscriptions to individual mobile workers who are taking advantage of the proliferation of wireless hotspots across the country. iobeam's flexible technology supports all current WiFi standards, including the emerging 802.11g specification. Its web site can be found at [www.iobeam.com](http://www.iobeam.com).

**About Preferred Jet Services**

Located at McCollum Field (KRYY) in North Metro Atlanta, Preferred Jet offers the very best in aviation services. The Preferred Jet facility is located on the south side of McCollum Field. It has over 80,000 square feet of hangar space with room for most aircraft up to and including Gulfstream G-V and Global Express aircraft. With over 13 acres of ramp space, Preferred Jet offers the largest transient parking area on the airport with plenty of room for the largest of aircraft with no risk of wingtip damage. Its web site can be found at [www.preferredjet.com](http://www.preferredjet.com).
