

Want to get online right now?

iobeam is a premier wireless internet service available at locations to suit your connection needs. Whether you are a mobile worker or a wired student or just like to stay connected, we can put you online in the place you are Right Now.

All you need is a wireless-enabled computer or PDA.

Got one? Just point your browser to www.iobeam.com, and we'll set you up.

OK : let's do it!

You need a laptop or a PDA with a wireless card or built in wireless capability such as Intel Centrino™. No special software or additional installation is needed.

You also need an iobeam subscription. Open a browser and subscribe online or purchase a subscription card from the venue where you are located.

At some of our premium or promotional venues no subscription is required! Just open a browser and you will be signed on.

Connecting your computer or PDA

Most computers with wireless capability discover wireless services automatically, and need no further setup to use the iobeam service. Some computers will require you to set the SSID (or network identifier) to "iobeam". The procedure for setting the SSID is simple, but varies depending on the computer and wireless card you use. Your computer will guide you through this process, should it be needed. You may also find information at:

www.iobeam.com/help/ssid.html.

When your computer has established a wireless network connection with iobeam, launch a web browser and we will guide you through signing up, or signing on if you already have a subscription.

Welcome to iobeam!
