

Present demand for personal internet access is growing exponentially. The individual and business user market is no longer satisfied with light-duty internet connections. Many users have developed a significant need for internet access that follows them well beyond the home or office.

**iobeam™** is a leading wireless internet service provider addressing the needs of mobile internet users at specialty venues throughout the United States.

**iobeam™** offers high-speed, instant-on connections wherever you and your patrons need it. We provide end-to-end hardware and subscription services for inexpensive deployment of wireless networks in any environment.

**: iobeam offers several benefits to our wireless venues.**

- iobeam hot spots extend needed services to mobile networkers quickly and affordably.
- iobeam's wireless internet access is 10 to 25 times faster than dialup internet connections, with considerably more convenience to the user.
- iobeam wireless internet does not require a phone line for each user.
- Our basic wireless coverage extends 500 feet from the service gateway.
- Network service quality is monitored 24 hours, 7 days a week.
- iobeam venues enjoy additional revenue from the rapidly growing mobile networker market.
- Recurring venue operating costs are less than those offered by any other hotspot provider.
- iobeam venues recoup their initial setup charges for hardware and installation within a few months.

**What's Required?**

The **iobeam™** wireless service requires an on-site broadband internet connection, such as DSL or Cable. **iobeam™** wireless service also requires installation of an iobeam Service Gateway and one or more antennas.

All users must have industry-standard 802.11 cards (Wi-Fi or Centrino are compatible.) Many new PCs are shipped with 802.11 capability installed.

**It's easy to get started**

Your **iobeam™** Sales Representative will be available to help at every step along the way to getting wireless service installed at your site.

**Step 1 :**

A certified **iobeam™** technician will conduct a free site survey at the venue to determine the best placement of the **iobeam™** service gateway and related equipment.

**Step 2 :**

If the site does not already have a qualified broadband internet connection, your **iobeam™** sales representative will assist in ordering this service.

**Step 3 :**

iobeam technicians will install and configure the **iobeam™** Service Gateway and any additional radio equipment.

You will receive training on how the service works when installation is complete at your site. You will be issued a block of Private Member subscriptions you may assign or resell to your patrons, according to the terms of your Private Venue Subscription. You will also be given a block of single-use Subscription Cards you may resell to your patrons, provide as convenience, or use to promote the service.

it's easy :  
it's wireless internet  
where you need it :
